

BAMBOOST LLP

DIGITAL COMMERCE • BRAND BUILDING • GROWTH

E-COMMERCE WEBSITE PROPOSAL

Prepared for

ZEEN

A New Women's Fashion Brand • Online-First

PROPOSAL DATE

16 May 2026

VALID UNTIL

30 days from proposal date

A Note Before You Read

Respected Sir / Madam,

Thank you for trusting us with the chance to build the online home of your new brand. You have already built one successful clothing brand. Customers know it, trust it, and come back to it. That trust is precious, and we understand that the new brand must be built with the same care.

This document explains what we will build for Zeen — in simple words, without unnecessary technical language. Wherever a technical word is unavoidable, we have explained what it means and why it matters for your business.

In short, we will deliver a complete online shop that:

- Looks beautiful, loads fast, and works perfectly on a mobile phone (where 8 out of 10 of your customers will shop).
- Carries Zeen's brand identity through every screen — colours, typography, photography style, tone of voice — built carefully over 8 weeks so that the website looks and feels like a premium label from the very first second a customer lands on it.
- Accepts payments safely — UPI, cards, net banking, wallets, and Cash on Delivery.
- Can handle a normal day of 10,000 customers and a festival-rush day of 1,00,000 customers without breaking down.
- Gives you a simple admin panel where one person from your office can manage everything — products, prices, orders, stock, offers, customers — from a laptop or phone.
- Connects to marketing tools that will bring customers in, and analytics tools that will tell us what is working and what is not.

We have priced this proposal at ₹3,42,000 — a flat, all-inclusive amount — and we have committed to an 8-week delivery timeline. The extended timeline is a deliberate choice: a sub-brand needs visual identity that is unmistakably its own, and that work cannot be rushed. Please read on. We have tried to leave nothing unsaid.

Warm regards,

The Team at Bamboost LLP

What is Inside This Proposal

1. Understanding Your Brand and What You Need
2. The Big Picture — What We Are Building
3. Customer-Facing Website — Every Feature, Explained
4. Admin Panel — How You Will Run the Shop
5. Payment, Shipping and Cash on Delivery
6. Bringing Customers In — Marketing Features
7. Understanding Your Business — Analytics and Tracking
8. Connections We Will Set Up With Other Tools
9. Safety and Security — Protecting Your Business
10. Handling Heavy Traffic — Festival Days and Sale Days
11. The 8-Week Timeline
12. Pricing Breakdown
13. Payment Schedule
14. What Is Included After Launch
15. What Is Not Included in This Price
16. Who Does What — Your Side and Our Side
17. Terms and Conditions
18. How to Move Forward

1. Understanding Your Brand and What You Need

Based on our conversations, here is what we have understood. If anything is wrong, please tell us before we begin — it is much easier to correct now than later.

About the Brand

- Zeen is a new women's fashion brand being launched as a separate identity from your existing label.
- The brand will sell online only — there will not be a physical shop to begin with.
- The first category will be churidars, divided into Casual Wear and Ethnic Wear.
- New categories — kurtas, suits, and other women's wear — will be added later. The website must be built in a way that adding new categories is easy.

Your Goals

- Bring in approximately 10,000 customer visits per day from marketing activities.
- Be ready for festival and sale days when up to 1,00,000 customers may visit in a single day.
- Make it easy for customers to find a product, trust the brand, and complete the purchase quickly.
- Make it easy for your team to manage the shop without needing a technical person on staff every day.

Why This Matters

A small thought before we move on.

A website that looks good is easy to build. A website that brings money in, day after day, even during a festival rush — that is a different matter. The decisions we make about the foundation (the server, the security, the speed, the payment system) decide whether the business grows smoothly or struggles. We have taken those decisions for you carefully, and explained them later in this document.

2. The Big Picture — What We Are Building

To make this easy to understand, think of your online shop as having four parts. Each part has a job. Each part works together with the others.

PART	WHAT IT DOES
1. The Shop	This is what your customer sees — the home page, product photos, prices, the bag, the checkout. This must be beautiful, fast, and trustworthy.
2. The Admin Panel	This is what your team sees — a private screen where products are added, orders are managed, stock is updated, offers are created, and reports are read.
3. The Engine	The invisible part. It handles payments, sends confirmation emails and WhatsApp messages, keeps stock counts correct, and remembers everything. Built on Laravel — a trusted, professional framework used by thousands of successful Indian online shops.
4. The Server	The actual computer where your shop lives, working 24 hours a day. We are using an enterprise-grade server set up to handle 1,00,000 visitors in a day without slowing down.

3. Customer-Facing Website — Every Feature, Explained

This section lists everything a customer will see and use on the website. We have grouped features so it is easier to follow.

3.1 The Homepage and Brand Storytelling

- **Changeable banners** — A hero banner section that can be changed by you whenever a new collection arrives — no developer needed.
- **Feature shelves** — Sections for new arrivals, bestsellers, festival picks, and seasonal collections. Each section can be turned on or off from the admin panel.
- **Brand story block** — A short, scrollable story area where Zeen's identity, values, and craftsmanship can be presented. Customers buy stories as much as they buy clothes.
- **Customer love wall** — Real customer photos and reviews shown on the homepage — proven to increase trust and purchases.
- **Promotional strips** — Sections for ongoing offers (e.g. "Flat 20% off on Ethnic Wear") that count down to expiry — creates urgency.

3.2 Product Catalogue

- **Unlimited products and categories** — Unlimited products and unlimited categories. Today: Churidars (Casual / Ethnic). Tomorrow: Kurtas, Suits, anything. Adding a new category takes 30 seconds.
- **Sub-categories** — Sub-categories within categories (Casual Wear → Cotton, Rayon, Printed, etc.). Easy filtering for the customer.
- **Smart filters** — Filters on the side — by price, colour, size, fabric, occasion, sleeve type, neckline. Customer finds what she wants in seconds.
- **Sorting** — Sort by price (low to high, high to low), newest first, most popular, best rated.
- **Live search** — Predictive search — as the customer types "chu" the dropdown already shows churidars. As she types "cot" it suggests cotton products. Reduces the chance she leaves without finding what she wants.
- **Size and colour variants** — Each product can have multiple sizes, multiple colours, and a separate stock count for each combination — so XL Red and M Blue are tracked separately.
- **High-quality image gallery** — Up to 8 photos per product, with a zoom-in feature when the customer hovers or taps. Optional 360° view if photos are provided.
- **Size chart** — A clear size chart on every product page, with measurements in inches and centimetres. Reduces returns significantly.

- **Product information** — Fabric details, washing instructions, country of origin, and "why we love this piece" — small text blocks that make the brand feel honest and premium.
- **Related products** — "You may also like" and "Customers who bought this also bought" sections on every product page. This single feature has been proven to increase the order value by 15–25%.
- **Stock urgency** — A live indicator like "Only 3 left" when stock is low — creates a gentle urgency to purchase.
- **Customer reviews** — Star ratings and written reviews from customers who have actually purchased. Customers can also upload a photo with the review.

3.3 The Bag and Checkout

- **Guest checkout** — Customer can buy without creating an account. One of the biggest reasons online shops lose customers is forcing them to register.
- **Account checkout** — Returning customers can save their address, phone, and email, and never type it again.
- **Save the bag** — If a customer adds something to the bag but does not buy, the bag is remembered for 30 days on her phone. She comes back, and it is still there.
- **Wishlist** — Customer can save products for later in a private wishlist.
- **Pin code check** — The pin code field tells the customer if delivery is available, the expected delivery date, and the shipping cost — before she enters her full address.
- **Payment options** — UPI, all credit and debit cards, net banking, wallets (Paytm, PhonePe, etc.) — all through CCAvenue. Plus Cash on Delivery, with admin controls (explained later).
- **Coupon application** — Discount codes can be applied at checkout — e.g. WELCOME10, FESTIVE25 — and the discount is shown immediately.
- **Gift wrap and notes** — Customer can choose to gift-wrap an order and add a personal message. (Small revenue boost, big customer happiness.)
- **Transparent pricing** — Order total, delivery charge, taxes (GST), and discount are all shown clearly. No surprises at the final step — which is the most common reason for an order being abandoned.

3.4 After the Purchase

- **Order confirmation** — Sent to the customer immediately on email, SMS, and WhatsApp.
- **Order tracking** — Customer can log in (or use a link sent to her phone) and see exactly where her order is — placed, packed, shipped, out for delivery, delivered.
- **Shipping updates** — Automatic SMS and WhatsApp updates at every stage.
- **Easy returns and exchanges** — Customer can request a return or exchange directly from her order screen, within the return window you set. The request comes to the admin panel for approval.

- **Review request email** — Sent automatically after the customer has received and (hopefully) loved the product.

3.5 Customer Account Section

- My Orders (with reorder option in one click)
- My Addresses (multiple saved addresses — home, office, mother's house)
- My Wishlist
- My Reviews
- Refer & Earn — referral code that gives both the customer and her friend a discount
- Wallet — where refunds are stored as store credit (optional, recommended)
- Loyalty Points — earn on every purchase, redeem on next purchase

3.6 Other Customer-Side Pages

- About Us, Contact Us, Shipping Policy, Return & Refund Policy, Privacy Policy, Terms of Service — all written and ready to publish.
- FAQ section — answers to common questions, organised by category.
- WhatsApp chat button on every page — taps directly to your support number.
- "Notify me" button on out-of-stock products — customer is automatically informed by email and SMS the moment that size/colour is back in stock. (One of the most powerful sales features that most websites do not have.)

4. Admin Panel — How You Will Run the Shop

This is the private screen that you and your team will use to manage the business. We have designed it to be as simple as using a smartphone. No technical knowledge needed.

4.1 Dashboard — The First Screen You See

- Today's orders, today's sales, today's visitors — in big, clear numbers.
- Comparison with yesterday and last week — so you immediately know if things are going up or down.
- List of orders that need your attention (new, packing pending, shipping pending).
- Low-stock alert — products that are running out, so you can restock before they sell out.
- Top 10 selling products this week.
- New customers vs returning customers.

4.2 Product Management

- Add a product in under 2 minutes — name, photos, price, sizes, colours, description, category. Done.
- Edit any product at any time — change price, change photo, change description.
- **Bulk upload** — Add many products at once by uploading an Excel file — useful when you receive a new collection of 50 churidars.
- Move products in or out of the catalogue without deleting them. Useful for seasonal items.
- Stock management — increase stock when new pieces arrive, decrease automatically as orders are placed. The system never lets a customer order a piece that is out of stock.
- Different prices for different times — set a sale price that automatically becomes the regular price after the sale ends.

4.3 Order Management

- See every order — who placed it, what was ordered, payment status, shipping status.
- Move orders through stages — New → Confirmed → Packed → Shipped → Delivered.
- Generate the shipping label and the invoice (with GST) with one click.
- Print the packing slip in the right size for your packing table.
- Refund a payment, cancel an order, edit an address — with full record of who did what and when.
- Search for any order by order number, customer name, phone, or product.

4.4 Cash on Delivery Controls (Specially Designed)

Why this matters

Cash on Delivery is essential in India but it is also where most online shops lose money — to fake orders, refused parcels, and serial returners. We have built strong COD controls so this does not happen to Zeen.

- **Master switch** — Turn COD on or off for the entire shop in one click.
- **Order limit** — Make COD unavailable above a certain order value (e.g. "No COD over ₹5,000").
- **Pin code rules** — Make COD unavailable in specific pin codes that have a history of returns.
- **COD handling fee** — Charge a small extra fee for COD orders (e.g. ₹50). This is industry standard and reduces fake orders.
- **Partial advance** — The system can require a small payment (e.g. ₹100 by UPI) before confirming a COD order, so the customer is committed.
- **Blacklist by phone** — If a customer has had 2 returned-undelivered orders, the system can automatically block COD for that phone number — and only allow prepaid.
- **COD report** — Full COD report — how many COD orders, how many delivered, how many returned, what is the net revenue.
- **Cash collection tracking** — The delivery boy collects cash; the courier company pays you in 2–5 days. This is all reconciled in the admin.

4.5 Customer Management

- Every customer's name, phone, email, total orders, total spent, last order date, and shipping address — in one place.
- Tag customers — VIP, frequent returner, new, lapsed, etc.
- Send a one-off email or SMS to all customers, to a group, or to a single customer.
- See a customer's full conversation history, order history, and notes from your team.

4.6 Offers, Coupons and Discounts

- Create coupon codes — flat amount off, percentage off, free shipping, buy-one-get-one.
- Conditions — minimum order value, only for first-time customers, only for certain categories, only on certain days.
- Set expiry dates and usage limits — "first 100 customers only".
- Automatic discounts — e.g. "Festival Sale, flat 30% off all Ethnic Wear, no code needed."
- Volume discounts — "Buy 2 churidars, get 15% off."

4.7 Content Management

- Change homepage banners yourself — drag, drop, save, live.
- Edit any page content (About Us, Shipping Policy, etc.) without a developer.
- Add or remove menu items in the navigation.
- Manage the blog (if you choose to run one — and we strongly recommend it for SEO).

4.8 Staff Accounts and Permissions

- Create separate accounts for different staff members — your packing person, your customer service person, your accounts person.
- Decide what each person can see and cannot see. The packing person sees orders but not financials. The accounts person sees financials but not customer phone numbers. You see everything.
- Full activity log — who logged in, what was changed, when. If anything goes wrong, you know who to ask.

4.9 Reports You Can Pull

- Daily, weekly, monthly sales report — by category, by product, by location.
- Tax (GST) report ready to share with your CA at month-end.
- Stock report — what is in stock, what is low, what is gone, what has not sold in 30 days.
- Customer report — new customers, returning customers, top 100 customers by spending.
- Marketing report — which coupon brought how much sale, which channel brought which customer.
- Returns report — which products are being returned and why.
- Every report can be downloaded as Excel or PDF.

5. Payment, Shipping and Cash on Delivery

5.1 Payment Gateway — CCAvenue

CCAvenue is one of India's largest and most trusted payment gateways. Through a single CCAvenue connection, your customers can pay using:

- UPI (PhonePe, Google Pay, Paytm, BHIM, and all UPI apps)
- Credit cards (Visa, MasterCard, RuPay, American Express)
- Debit cards
- Net banking (all major Indian banks)
- Wallets (Paytm, Mobikwik, Amazon Pay, and others)
- EMI options on credit cards and Debit-EMI

Our team has built and maintained CCAvenue integrations across many e-commerce projects in India. We will handle the entire integration — from your CCAvenue paperwork to going live — without delay.

5.2 Cash on Delivery

All COD features are detailed in the Admin Panel section above (4.4).

5.3 Shipping Integration

- Live connection to Shiprocket (or a courier of your choice) — automatically books a courier the moment an order is confirmed.
- Customers get tracking numbers and live status updates.
- Shipping rates can be set by weight, by location, or kept free above a certain order value.
- Bulk shipping label printing — print 50 labels in 30 seconds when processing the day's orders.
- Auto-pin-code serviceability check — customer enters her pin code on the product page, system instantly tells her if delivery is available and how many days it will take.

5.4 GST and Invoicing

- GST is calculated automatically based on the customer's state (intra-state vs inter-state, CGST/SGST vs IGST).
- Every order generates a professional, GST-compliant invoice with your company details, GSTIN, and HSN codes.
- HSN code can be set per product or per category.
- Monthly GST report ready for your accountant.

6. Bringing Customers In — Marketing Features

Having a beautiful shop is not enough. Customers must keep coming back, and new customers must keep arriving. The website is built with the following marketing tools already inside — no need to buy or set up anything extra.

6.1 Recovering Lost Sales (Abandoned Cart)

This single feature pays for the entire website many times over.

Research shows that 7 out of 10 customers who add a product to the bag do not complete the purchase. Most of them are just busy, distracted, or got a phone call. They will buy if reminded gently.

Our system automatically sends a series of reminders — first by WhatsApp after 1 hour, then by email after 4 hours, then by SMS after 24 hours, sometimes with a small discount in the last reminder. On average, this recovers 10–20% of lost sales.

6.2 Email and SMS Marketing

- Build a customer email list automatically from every purchase and every newsletter sign-up.
- Send a beautifully designed campaign ("New Festive Collection Is Here") to all customers, or just to customers in Kerala, or just to customers who bought ethnic wear.
- Send SMS for time-sensitive offers, with a one-click link to the offer page.
- Birthday and anniversary wishes sent automatically with a small discount — feels personal, builds loyalty.

6.3 WhatsApp Business Integration

- Order confirmation, shipping update, delivery confirmation — all on WhatsApp, where customers actually read.
- Order receipts and invoices delivered on WhatsApp.
- Customer can reply directly to ask a question — and your support team can respond from the admin panel.
- Promotional broadcasts to opted-in customers (e.g. "Sale starts tonight at 9 PM").

6.4 SEO — Showing Up on Google

If a woman in Kochi types "buy cotton churidar online" on Google, we want Zeen to appear in the first results. This is called SEO (Search Engine Optimisation), and it brings free traffic forever.

- Every page is built to Google's technical standards — fast loading, mobile-friendly, properly structured.
- Every product page has its own SEO-friendly URL, title, and description that can be edited.
- Automatic sitemap submitted to Google — so Google knows about new products within hours.
- Built-in blog (recommended): articles like "How to choose the right churidar fabric for summer" bring in customers who are not yet searching for your brand but will discover you.
- Image SEO — every product image gets the right tags so it appears in Google Image search.
- Open Graph tags — when a customer shares a product on WhatsApp or Facebook, it appears as a beautiful preview with photo, name, and price.

6.5 Social Media Sale Tools

- Facebook Shop and Instagram Shop integration — customers can browse products inside Instagram and tap to buy.
- "Shop the Look" — full outfit pages where Instagram-style photos are tagged with the products in the photo.
- Easy social sharing on every product — customer can share to her WhatsApp status or Instagram story with one tap.

6.6 Customer Loyalty

- Reward points on every purchase (e.g. 1 point per ₹100 spent) that can be redeemed on the next order.
- Tier system — Silver, Gold, Platinum customers get bigger discounts, early access to sales, free shipping.
- Refer-a-friend — every customer gets a personal code. When her friend buys, both get a reward.

6.7 Other Sales Boosters

- Pop-up that asks first-time visitors for their email in exchange for a 10% off coupon. (Builds the email list from day one.)
- Exit-intent popup — when a customer is about to leave, a small offer appears: "Wait — here's 5% off if you order today."
- Sticky bag — the cart icon always shows the number of items, so the customer is reminded.
- Countdown timer on sale products — increases conversion.
- Free shipping bar — "Add ₹250 more for free shipping" — increases the average order value.

7. Understanding Your Business — Analytics and Tracking

You cannot improve what you cannot measure. The website will have the following tracking and analytics tools connected from day one, so that every decision — what to stock more, what to discount, where to advertise — is based on real numbers and not guesses.

TOOL	WHAT IT TELLS YOU
Google Analytics 4	How many visitors came today, where they came from (Google, Instagram, direct), what they looked at, what they bought, where they left without buying. The complete picture of your customer.
Google Search Console	What people are typing on Google to find your shop. Which of your products are showing in Google search. How to rank higher.
Google Tag Manager	A central control panel that connects all the other tracking tools — so adding a new one in future does not need a developer.
Meta Pixel	Tracks Facebook and Instagram ad performance. When you run an Instagram ad, this tells you which ad brought how many sales — so you do not waste money on ads that do not work.
Meta Conversions API	Even when Apple's privacy features block normal tracking, this gives Facebook and Instagram the right data to keep your ads efficient. Without this, your ad cost goes up by 30–50% over time.
Google Ads Conversion Tracking	Same idea, for Google Ads. Tells Google which ads are bringing sales so Google can optimise them automatically.
Microsoft Clarity (free)	Records anonymous customer sessions — you can literally watch how customers move through the shop, where they get stuck, where they leave. Like having a camera in a physical shop.
Heatmaps	Visual maps showing where customers click, scroll, hover. Tells you if customers are noticing your sale banner or ignoring it.
Internal Dashboard	Inside your admin panel — every number you need (revenue, AOV, return rate, COD vs prepaid) without going to Google Analytics. For non-technical daily use.

What This Means in Plain Words

After launch, we will sit with you and your team for one full session, and explain how to read these reports. You will know:

- How many people came today, and how many bought.
- Which marketing channel (Instagram, Google, WhatsApp) is bringing the most paying customers.
- Which products are being viewed the most and which are being bought the most — and the gap between the two tells you what to improve.
- At what step in checkout customers are leaving — so we can fix it.

8. Connections We Will Set Up With Other Tools

Modern online shops do not work alone — they talk to other services. We will set up all of the following connections so your shop works as one smooth system.

CATEGORY	WHAT WE WILL CONNECT
Payments	CCAvenue — including UPI, all cards, net banking, wallets, EMI.
Shipping & Logistics	Shiprocket (or alternative) — for courier booking, label generation, live tracking, and pin code serviceability.
Messaging	WhatsApp Business API (via approved provider) for transactional and promotional messages. SMS gateway for OTPs and alerts. Email service for transactional and marketing emails (SendGrid or similar).
Analytics & Tracking	Google Analytics 4, Google Search Console, Google Tag Manager, Google Ads, Meta Pixel, Meta Conversions API, Microsoft Clarity.
Social Selling	Facebook Shop catalogue feed, Instagram Shopping catalogue feed.
Reviews	Built-in review system. Optional: Google Customer Reviews integration so your shop shows star ratings in Google search results.
Customer Support	WhatsApp chat button. Optional: Tidio or similar live chat widget.
Invoicing & Accounting	Auto-generated GST invoices. Export of orders and tax data in formats compatible with Tally and Zoho Books.
Backup	Automatic daily backup to a secure cloud location, retained for 30 days. Disaster recovery in under 4 hours if ever needed.

9. Safety and Security — Protecting Your Business

This is one of the most important sections of this proposal, although the least visible to customers. A shop that is not secure can be hacked, customer data can be stolen, your bank account can be drained through fraud, and your brand reputation — which you have built over years on your first label — can be destroyed in a single day.

We do not take shortcuts here. The following is the security architecture we will put in place:

Server and Infrastructure Security

- **Hardened server** — Enterprise-grade cloud server with isolated environments for the live website, staging, and backups.
- **Web Application Firewall (WAF)** — A firewall sits between the public internet and your shop, filtering out attacks before they reach the website. Industry-standard providers used.
- **DDoS protection** — Specific protection against DDoS attacks — where someone floods the website with fake traffic to bring it down (a real threat for any successful Indian e-commerce shop).
- **CDN** — The website is served through a global content delivery network so that even from a slow internet connection, the shop loads quickly.

Customer Data Protection

- **SSL / HTTPS encryption** — All data travels encrypted between the customer's phone and your shop — so even on a public Wi-Fi, a customer's password and address cannot be read by anyone in between.
- **Password hashing** — Customer passwords are stored as encrypted, irreversible codes. Even if anyone got access to the database (they will not), the passwords would be useless.
- **Payment data isolation** — Customer credit card information is never stored on our server. CCAvenue handles it directly. We are PCI-compliant by design.
- **Encrypted database** — Customer phone numbers, addresses, and personal details are stored in encrypted form. Even backups are encrypted.
- **DPDP Act readiness** — Compliance with India's data protection laws — customer can request her data, customer can ask for her data to be deleted.

Anti-Abuse and Fraud Prevention

- **Rate limiting** — A single user cannot make more than a certain number of requests per minute. This blocks bots, prevents brute-force password attempts, and stops scrapers from copying your catalogue.
- **OTP verification** — OTP-based login and OTP at checkout for COD orders — confirms the phone number is real.

- **CAPTCHA** — CAPTCHA on login, registration, and checkout — blocks automated fake accounts.
- **Fraud detection** — The system flags orders that look unusual — same address used with different names, very high-value first orders, rapid repeat orders from one phone — for manual review.
- **Blacklist** — Customers can be added to a block list (by email, phone, or device) and cannot place orders.

Admin Panel Security

- **Two-Factor Authentication** — All admin accounts require username, password, AND a 6-digit OTP sent to the admin's phone. No password alone can give access.
- **Individual logins** — Each staff member has their own login. No password sharing.
- **Session timeout** — Admin panel inactive for 15 minutes? Auto-logout.
- **Activity log** — Every action — every product edit, every order change, every refund — is logged with timestamp and username. Tamper-proof.
- **IP whitelisting** — Optional: restrict admin panel access to specific IP addresses (your office network).

Code-Level Security

- **Input validation** — All inputs from customers are validated before being processed — preventing SQL injection, cross-site scripting, and other classic attacks.
- **CSRF protection** — All forms are protected against cross-site request forgery (CSRF) — preventing attackers from tricking your admins into performing actions.
- **Security headers** — Headers like Content Security Policy, X-Frame-Options, HSTS are correctly set — protecting against modern attacks.
- **Dependency updates** — All software, packages, and dependencies are kept up to date during the maintenance period. Security patches are applied as they are released.

Backup and Recovery

- Automatic full backup of database and files every 24 hours, kept for 30 days.
- Backups stored in a separate location from the main server — so even if the main server is destroyed, your shop can be restored.
- Tested recovery process — we run a recovery drill before launch to confirm it works.

In simple words

Imagine your physical shop has a steel shutter, a security guard, CCTV cameras, a fire alarm, a vault, and an insurance policy. That is what we are doing for your online shop. The customer never sees any of it. But without it, one bad day can wipe out years of work.

10. Handling Heavy Traffic — Festival Days and Sale Days

Most online shops collapse the moment they get busy. The day after their first big Instagram campaign goes viral, the website is unreachable, customers are angry, and money is lost. We have built Zeen's shop to not have this problem.

How We Achieve 1,00,000 Visitors a Day Capacity

- **Enterprise server** — Your shop runs on a high-specification dedicated cloud server with the ability to add more power when needed.
- **Auto-scaling** — When traffic spikes, more server resources are activated automatically. When traffic drops, they go back to normal — so you do not pay for capacity you do not need.
- **Caching layers** — Repeated parts of the shop (product photos, category lists, prices) are pre-loaded in fast memory, so the database does not have to be asked every time. This is the single biggest reason for fast loading under heavy load.
- **Database tuning** — The database is optimised and indexed properly — the difference between a query taking 5 seconds and 50 milliseconds.
- **Image optimisation** — Images are automatically optimised — a photo that is 2 MB in the camera becomes 150 KB on the website, without losing visible quality. Loads 10× faster.
- **CDN** — Static content like images, CSS and JavaScript are served from a global content delivery network, so they load from a server near the customer.
- **Background job queue** — Tasks like sending order confirmation emails, generating invoices, and updating shipping status happen in the background — so the customer's screen never waits.
- **Uptime monitoring** — The website is automatically monitored 24×7. If something goes wrong, our team is notified within minutes — not when a customer complains.

Load Testing Before Launch

Before we go live, we will simulate 1,00,000 visitors hitting the website at once, using industry-standard load-testing tools. We will share the report with you. The shop must pass this test before we open it to real customers.

Speed = Sales

Studies consistently show that for every 1 second delay in page load time, online sales drop by 7%. The investment in performance and scalability is not optional — it is one of the single biggest factors deciding whether Zeen makes money or loses customers to faster competitors.

11. The 8-Week Timeline

From the day you sign and the advance is received, the shop will be live in 8 weeks. We have deliberately set aside two extra weeks compared to a standard build — both at the design stage — because a sub-brand's first impression has to be flawless. Here is exactly what happens, week by week.

WEEK	PHASE	WHAT HAPPENS
Week 1	Discovery & Brand Deep-Dive	• Detailed discovery sessions with your team • Deep study of Zeen's brand vision, target customer, and positioning • Reviewing your existing brand for points of differentiation • Competitor and reference study (premium Indian women's wear brands) • CCAvenue paperwork initiated • Domain and hosting setup • Category and sub-category structure finalised • Project kick-off meeting
Week 2	Design Direction	• Translating your brand identity into a visual language for the web • Colour palette refinement for digital screens • Typography pairings and hierarchy • Photography style and image treatment guidelines • Design direction document shared for your review
Week 3	Detailed Design	• Homepage design (3 versions for you to choose from) • Category page, product page, checkout design • Mobile design (priority — 80% of customers will shop on phone) • Admin panel design • Email and WhatsApp template designs • Sign-off from your side before moving to development
Week 4	Core Development	• Server architecture set up • Core shop functionality built • Product catalogue, search, filters • Customer accounts, wishlist, bag • Admin panel: product management, order management
Week 5	Payments & Shipping	• CCAvenue payment gateway integrated and tested • Cash on Delivery flow built with all admin controls • Shiprocket / courier integration

WEEK	PHASE	WHAT HAPPENS
		• GST invoice generation • Email, SMS, WhatsApp notification system • Admin: coupon system, customer management, reports
Week 6	Marketing, Analytics & Polish	• All analytics tools connected (GA4, GSC, GTM, Pixel, etc.) • Abandoned cart recovery system • SEO optimisation across all pages • Loyalty, referral, wishlist features • First batch of products uploaded (in coordination with you) • Content pages (About, Policies, FAQ) finalised
Week 7	Testing & Hardening	• Full quality assurance — every feature tested • Browser and device compatibility testing • Load testing for 1,00,000 visitors • Security audit and penetration testing • Performance tuning and image optimisation • Bug fixes from your review feedback
Week 8	Training & Launch	• Training your team on the admin panel (one full session) • Handover documentation provided • Final approvals from your side • Soft launch / preview window • GO LIVE • Post-launch monitoring (first 7 days, close watch)

Note on the timeline

The 8-week timeline assumes prompt responses from your side on design approvals (within 2 working days), product photos and content (delivered by end of Week 5), and CCAvenue paperwork. If any side takes longer, the timeline shifts equally — but we will keep you informed every Monday with a status update.

12. Pricing Breakdown

The total project cost is ₹3,42,000 (Three Lakh Forty-Two Thousand Rupees only), as a flat all-inclusive amount. Here is the full line-item breakdown so you can see exactly where the investment is going.

#	ITEM	AMOUNT (₹)
1	Discovery, brand deep-dive, planning, and premium UI/UX design for Zeen as a distinct sub-brand (homepage, category, product, checkout, admin) — including 3 homepage directions, mobile-first design, email and WhatsApp template designs	58,000
2	Core e-commerce platform — Laravel-based, customised for Zeen (catalogue, search, filters, bag, checkout)	59,000
3	Customer accounts, wishlist, loyalty, referral, reviews	20,000
4	Admin panel — full management system with all features described in Section 4	44,000
5	CCAvenue payment gateway integration (UPI, cards, net banking, wallets, EMI)	16,000
6	Cash on Delivery with advanced admin controls (Section 4.4)	12,000
7	Shipping integration (Shippo / courier API) + GST invoicing for end-customers	14,000
8	Email, SMS, WhatsApp notification system + abandoned cart recovery	18,000
9	Analytics & tracking setup (GA4, GSC, GTM, Meta Pixel, Conversions API, Google Ads, Clarity, heatmaps)	14,000
10	SEO setup, schema, sitemap, social previews, Facebook & Instagram catalogue feeds	12,000
11	Security hardening — WAF, rate limiting, 2FA, encryption, OTP, fraud rules, security headers	18,000
12	Performance & scalability setup — caching, CDN, image optimisation, background queues, load testing for 1L visitors	16,000

#	ITEM	AMOUNT (₹)
13	Content writing (basic) for policy pages, About Us, FAQ, product description templates	7,000
14	Quality assurance, testing, bug fixing, browser & device compatibility	12,000
15	Hosting on enterprise server — Year 1 included	10,000
16	Admin panel training session + handover documentation	4,000
17	Post-launch monitoring (first 7 days) and stabilisation	5,000
18	Project management, weekly status reports, communication over 8 weeks	3,000
TOTAL PROJECT COST		₹ 3,42,000

The above is a flat, all-inclusive amount with no hidden charges from our side. The only recurring costs after the first year are hosting renewal and the third-party services described in Section 15.

13. Payment Schedule

The payment is divided into three milestones, tied to delivery — so your investment is always protected.

MILESTONE	WHEN	%	AMOUNT (₹)
Milestone 1	On proposal acceptance and project kick-off	40%	1,36,800
Milestone 2	On design approval and start of core development (end of Week 3)	35%	1,19,700
Milestone 3	On successful Go-Live (end of Week 8)	25%	85,500
	TOTAL	100%	3,42,000

Payments can be made by NEFT, RTGS, IMPS, or UPI to the Bamboost LLP business account. Bank details will be shared on signing.

14. What Is Included After Launch

14.1 One Year of Maintenance — Included Free

For 12 months from the date of Go-Live, the following is covered at no additional cost:

- Any bug or technical issue found in the website is fixed.
- If the website goes down for any reason, our team works to restore it on priority.
- All security patches and software updates applied.
- Server monitoring and performance tuning.
- Weekly backups managed.
- Support over email and WhatsApp during working hours.
- Up to 3 hours per month of minor admin assistance (e.g. "How do I create a coupon for tomorrow?").

14.2 New Features and Major Changes

If, after launch, you wish to add a new feature that was not part of this proposal — for example, a video shopping module, a multi-vendor marketplace, or an integration with a new accounting software — the work will be quoted separately based on the complexity. We will always share an estimate before starting any chargeable work.

14.3 Hourly Additional Services

For ad-hoc work that does not fit into the maintenance scope — for example, a special homepage redesign for a festival, or bulk product migration from a spreadsheet — we offer additional services at ₹1,300 per hour. Estimates are always shared and approved before work begins.

15. What Is Not Included in This Price

So that there are no surprises later, we want to be very clear about what is not part of this ₹3,42,000. There are two categories: items that need to be arranged separately, and recurring costs paid to third-party service providers when you use their services.

15.1 Items to Be Arranged Separately

ITEM	DETAILS
Product Photography	To be arranged by you. We will provide guidelines on photo dimensions, angles, and quality for best results on the website. We can recommend Kerala-based photographers if needed.
Logo & Brand Identity Design	The brand logo, brand colours, and visual identity for Zeen are to be provided by you (or your branding agency).
Specific Brand Content & Copywriting	Specific product descriptions, brand story, marketing copy, blog articles are to be provided by you. We will provide basic placeholder content and well-written policy pages, About Us, and FAQ.
Domain Name	To be purchased by you (e.g. zeen.com, zeen.in, shopzeen.com). We will help you choose and register — expected one-time cost ₹800–₹2,500 per year depending on the extension.
Social Media Marketing	Running Instagram, Facebook, and Google ads is handled by your marketing team. The website is fully ready to receive that traffic and track it.

15.2 Recurring Third-Party Service Costs

These are paid by you, directly to the service provider, only when and as you use the service. We have included realistic estimates so you can plan your budget. None of this money comes to Bamboost LLP.

A. CCAvenue Payment Gateway

CCAvenue is the payment gateway we recommend. They have two plans:

- **Startup Pro Plan** — Free to set up. No setup fee. Higher transaction rates (described below). Annual maintenance ₹1,200 (waived for the first year).
- **Privilege Plan** — Setup fee of ₹20,000–₹30,000 (paid once to CCAvenue). In exchange, you get lower transaction rates (around 1.10%–1.90% for domestic cards). Recommended if your monthly transaction volume is high — typically worth it above ₹15–20 lakh per month.

Our recommendation: Start with the Startup Pro plan (zero setup cost). After 3–6 months of trading, review the volume and decide whether the Privilege Plan upgrade saves enough on transaction fees to be worth the setup fee.

Transaction Discount Rate (TDR) on the Startup Pro Plan:

PAYMENT METHOD	RATE
Domestic Credit / Debit Cards (Visa, MasterCard, RuPay)	2.00%
UPI & Net Banking (58+ Banks)	2.00%
Prepaid Cards / Wallets (Paytm, Mobikwik, etc.)	2.00%
Domestic Corporate / Commercial Cards	3.00%
International Cards	3.00% – 4.00%
American Express & Diners Club	4.00%
Multi-Currency Transactions	4.99%

Plus 18% GST applicable on the processing fee (CCAvenue charges this — it is not part of our pricing). These rates are charged by CCAvenue on each successful payment — they are not optional and apply industry-wide for any payment gateway in India.

Note: CCAvenue may revise these rates from time to time. The rates above are as published by CCAvenue at the time of this proposal. We recommend reviewing the live rate card on CCAvenue's website before signing the merchant agreement.

B. SMS Service

- ₹0.18 – ₹0.25 per SMS (transactional SMS — order confirmations, OTPs)
- Estimated monthly cost at 10,000 customers/day: ₹3,000 – ₹6,000 per month
- Recommended providers: MSG91, Twilio, Fast2SMS — direct billing from the provider

C. WhatsApp Business API

- ₹0.30 – ₹0.85 per message (depending on category: utility, marketing, authentication)
- Plus monthly platform fee of ₹2,000 – ₹5,000 from the Business Solution Provider
- Estimated monthly cost at 10,000 customers/day: ₹8,000 – ₹15,000 per month (including platform fee)
- Recommended providers: AiSensy, Interakt, Wati, Gupshup — direct billing from the provider

D. Email Service

- Approximately ₹0.04 – ₹0.10 per email
- Most providers offer 3,000–10,000 free emails per month on starter plans
- Estimated monthly cost at 10,000 customers/day: ₹1,500 – ₹4,000 per month (transactional + marketing)
- Recommended providers: SendGrid, Mailgun, Amazon SES, Brevo — direct billing from the provider

E. Hosting — Year 2 Onwards

- Year 1 hosting is included in the ₹3,42,000.
- From Year 2 onwards: starts at ₹15,000 per year and scales based on actual traffic, storage, and resource usage.
- During heavy sale periods or viral marketing events, server capacity may need temporary scaling — this is billed based on actual usage.
- A transparent breakdown will be shared with you before each renewal, with no surprise charges.

F. Other Optional Subscriptions

- Premium live chat tools (Tidio, Tawk.to Pro, Freshchat): ₹1,500 – ₹5,000 per month if you choose to add them later.
- Advanced review apps with photo and video reviews: ₹2,000 – ₹4,000 per month.
- Advanced email marketing platforms (Klaviyo, Mailchimp Pro): ₹2,500 – ₹8,000 per month based on subscriber count.
- These are completely optional. The website is fully functional without any of them.

In plain words

Apart from the one-time ₹3,42,000 paid to us, the only recurring costs you must plan for are: hosting from Year 2 (starts at ₹15,000/year), SMS/WhatsApp/Email charges (only if needed), and CCAvenue's transaction fees (about 2% of every payment received). These are standard for any online business in India — they are not specific to us, and we have no control over the third-party rates.

16. Who Does What — Your Side and Our Side

A successful project is a partnership. To deliver in 8 weeks, both sides need to be on the same page about responsibilities.

OUR RESPONSIBILITIES (BAMBOOST LLP)	YOUR RESPONSIBILITIES (ZEEN)
• Complete design and development of the website • Admin panel build • All integrations (CCAvenue, shipping, analytics, etc.) • Security setup and load testing • Hosting setup (Year 1) • Basic content writing for policy and FAQ pages • Training your team • 12-month maintenance after launch • Single point of contact throughout the project	• Brand assets — logo, brand colours, fonts • Product photographs (we provide guidelines) • Product descriptions and brand-specific copy • Initial product catalogue data (Excel or shared list) • CCAvenue account paperwork (we will guide you) • Courier company account (Shiprocket etc.) • Domain purchase decision and payment • Timely approvals at design and milestone stages • A primary point of contact from your side

17. Terms and Conditions

Project Ownership

- Upon receipt of the full project payment, the website, its code, its design, and all content created by us specifically for Zeen become the property of the client.

Confidentiality

- All business information, customer data, and proprietary details shared with Bamboost LLP during the project remain strictly confidential, both during and after the project.

Timeline

- The 8-week timeline begins from the date of advance payment and submission of brand assets. Delays in feedback, asset delivery, or third-party paperwork (CCAvenue, courier, etc.) will extend the timeline accordingly.

Revisions

- Up to 3 rounds of design revisions are included in each design stage (homepage, product page, checkout, admin).
- Major direction changes after the design has been approved may be subject to additional charges.

Scope Changes

- New features or significant changes requested after this proposal is signed will be scoped and quoted separately. Work begins only after written approval.

Third-Party Services

- Bamboost LLP is not responsible for service interruptions, policy changes, or pricing changes from third-party providers like CCAvenue, Shiprocket, Google, Meta, WhatsApp, or hosting providers — but will help you navigate any such situation.

Refunds

- Payments made after the start of a milestone are non-refundable to the extent of work already completed.
- In the unlikely event of project cancellation by either side, work-done-to-date will be settled fairly.

Maintenance Scope

- The 12-month free maintenance covers bugs, downtime, and minor admin support. It does not cover new feature development or major design changes — those are charged separately as described in Section 14.

Dispute Resolution

- Both parties commit to resolving any disagreements through good-faith discussion first. If required, formal dispute resolution will be governed by the laws of India.

18. How to Move Forward

If this proposal meets your expectations, here are the next steps:

Step 1. Sign this proposal

Sign on the last page and share a scanned copy back with us by email or WhatsApp.

Step 2. Pay the first milestone (₹1,36,800)

Bank details will be shared by us on signing.

Step 3. Kick-off meeting

Within 2 working days of payment, we will sit with your team for a detailed kick-off — finalising the brand direction, structuring the catalogue, and starting Week 1 of the timeline.

Step 4. Weekly updates

Every Monday until Go-Live, you will receive a clear written update — what was completed last week, what is planned this week, and any items pending from your side.

Step 5. Go-Live in 8 weeks

Zeen opens its doors to its first customers.

A final word

What we are proposing is not just a website. It is a foundation on which a new brand can grow into something substantial. We understand the responsibility, because we know how much hard work goes into building a clothing label that customers trust.

We have priced this proposal honestly — what you see is what we will deliver, and a little more wherever we can. Our reputation matters to us as much as Zeen's matters to you.

Thank you for considering Bamboost LLP. We look forward to building this together.

Acceptance

By signing below, the client agrees to the scope of work, timeline, pricing, payment schedule, and terms outlined in this proposal.
